

Guide medical professionals  
around the world into becoming  
skilled users of your products.

## Eppix Mentor allows you to:

**Train and certify users** of your medical devices with a robust training platform that is efficient and easy to deploy.

**Employ a combination of online and offline** training modules to fit the needs of your customers.

**Comply with country-specific regulatory requirements** and maintain accurate tracking of training completion, by user.

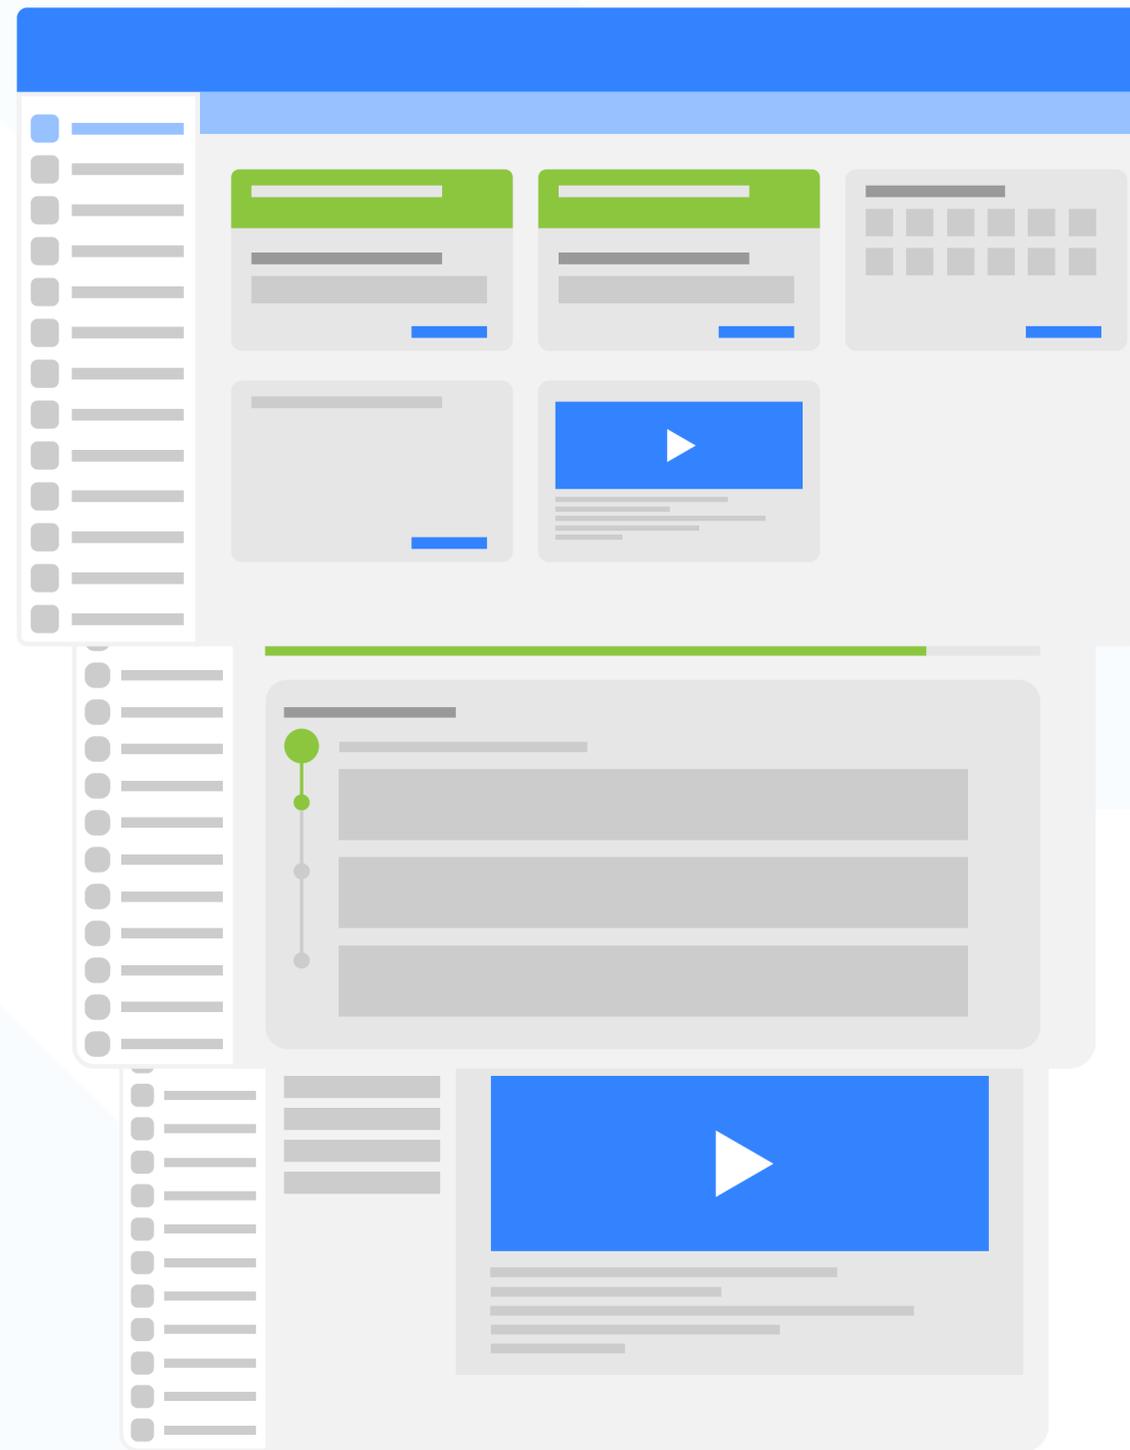

**Identify sales opportunities** due to detailed overviews and reports.

## A Better Way to Train

We developed Eppix Mentor together with one of the leading medical device and healthcare companies in the world. With the goal to provide a robust and easy-to-use training system that is tailored for medical devices. Our web-based learning application offers a wide range of features that focus on ensuring the user knows the proper use of your device, and provides clear confirmation that the trainee has successfully completed the training. Because we understand that it is critical that medical devices are used exactly as designed — and there is risk if instructions aren't followed — we created Eppix Mentor to serve this unique need.

## Verification and Certification

The medical device sector requires stringent tracking and verification to prove that users received proper training. Eppix Mentor provides a clear and verifiable overview of all authorized users of your devices. It also allows trainers to customize which verifications are needed at each step of the curriculum; the user is not allowed to proceed to the next level unless they have proven proficiency. If desired, trainees who have successfully completed the training can supervise other trainees during procedures.

## A Smart Training System that is Robust Yet Flexible

With its modular training design, trainers can use Eppix Mentor to mix and match online and offline elements to customize training to fit each product.

### The Online Environment

- Upload various file formats, ranging from PDF documents to videos.
- Easily create online exams to verify that the medical professional has mastered the material in each module.

### Offline Training Elements

- Easily schedule on-site events such as hands-on training and supervised procedures.
- Use practical in-person training as a complement to the online training, to suit the needs of each product's learning plan.

The modular design is highly flexible allowing trainers to set up distinct groups based upon various criteria, such as regulatory region. Within these groups, different training paths or products can be assigned.

## Smart Strategic Data

Because Eppix Mentor tracks training progress at both the individual and group level, it gives visibility into their proficiency of specific medical devices. This provides an opportunity to identify where additional training may be needed, or where users may be interested in hearing about new technology offerings.

## Value-added content

Eppix Mentor's "shared resources" function provides an easy way to share new developments, cases, editorial and other news items with medical professionals pertinent to their specific field. An ability to track who received which content provides other contact opportunities in the future, to keep them up-to-date.

## Training That Looks Like You

Eppix Mentor can be fully customized with your company's branding. When customers take your product training, it will feature your logo and colors, to be an extension of your brand.

## About Eppix

For more than a decade, Eppix has been developing web applications tailored for the healthcare space. Our products are known for being smart, easy-to-use and tailored to the needs of our customers. Our dedicated team is based in Elst, The Netherlands, and our solutions are used by customers around the globe.

Information security and cybersecurity are at the core of Eppix's focus. That is why we have several national and international certifications: The NEN 7510, ISO 27001 & 9001.

- ✓ Learning management system
- ✓ Certification
- ✓ Blended learning
